

SPG-NA grant for SEG/GSH Online courses

SPG-North America chapter (SPG-NA) will award funding to attend geophysical online courses conducted by SEG (Society of Exploration Geophysicist) or GSH (Geophysical Society of Houston). For example: GSH is presently organizing an online course titled “Understanding Seismic Anisotropy in Exploration and Exploitation: Hands on” by Dr. Leon Thompson. It is a four half-day course, covering all areas of seismic anisotropy.

SPG-NA has decided to fund a group of students (~10) to attend such courses based on the availability of funds. A student representative should be responsible for coordinating and organizing this event at a selected venue.

Please apply in advance if a group of students from your university/institute are interested to attend such courses. You can visit SEG or GSH websites to see the upcoming courses. Many courses are available online. Some of those are listed on the SPG-NA website (<http://www.spgnorthamerica.org/resources.html>).

If SPG-NA decides to fund, then it will take care of the course registration fees and you need not worry about any course related fees.

Please send your request to SPG-NA by e-mail to spgnam@gmail.com along with the contact details of all the interested attendees. Clearly mention their name, email and phone numbers.
